Subject: DuPont/Chemours; Vienna PWS

This morning I received a call from Andrew Hartten of Chemours. Andrew has been the project manager overseeing the water well testing and provision of alternate water at the Chemours Washington Works site and surrounding community for years. Andrew informed me that Chemours has purchased and is preparing for the installation of carbon filters at each of the three Vienna PWS distribution points; the first of which may be ready for operation in about a month. In addition, Chemours has been testing the effectiveness of point-of-use carbon filters. Varying amounts of Vienna water had been run through the filters and samples sent off to the lab for analysis. Hartten agreed to share the results with us when analyses are completed.

Roger
